Caveats: This post is not to criticize Ricoh printer's lack of Mac OS X support.

This means my only option is to print using PCL The PPD on Ricoh's site is only for PostScript.

I need to print to a Ricoh Aficio 2035e printer that doesn't have PostScript installed.. It is expensive to get the PostScript level 3 option on the Ricoh C2051 because Ricoh has to pay a license to Adobe.. While PCL drivers are included (in 10 3) for some printers, the Aficio 2035e isn't one of them.. What you can't are printing colour and printing grayscale high quality than 600dpi.

I could set the printer up as an HP Laserjet 5Si using CUPS and Gimp-Print and it worked.. There is a good reason why we need to pay a hefty S\$1000 to be able to print from Mac.. It merely provides a workaround to do printing grayscale on Ricoh C2051 for Mac. [Xbox 360 Xex Menu 12 Download](#)
